Bayesian inference of an individual-based mutualistic network
08_02

Net 08_02

```r
library(BayesianNetworks)
library(network.tools)
library(tidyverse)
theme_set(theme_minimal())
options(mc.cores = 4)
```

Data

Load dataset and sampling effort per individual plant:

```r
web <- readr::read_csv(here::here("data/nets_raw", paste0(params$net, "_int.csv"))) |>
  arrange(ind)
```

```
## Rows: 24 Columns: 12
## -- Column specification --------------------------------------------------------------
## Delimiter: ","
## chr  (1): ind
## dbl (11): Ducula_badia, Gracula_indica, Iole_indica, Irena_puella, Macaca_radiata, Macaca_silenus, Oc
##
## i Use `spec()` to retrieve the full column specification for this data.
## i Specify the column types or set `show_col_types = FALSE` to quiet this message.
```

```r
mat <- as.matrix(web[, -1])
mat <- apply(mat, c(1,2), as.integer)
rownames(mat) <- web$ind

# create numeric vector of sampling effort for each plant with names = plant id
effort <- readr::read_csv(here::here("data/nets_attr", paste0(params$net, "_attr.csv"))) |>
  select(ind, starts_with("se_")) |>
  filter(ind %in% web$ind) |>
  arrange(ind)
```

```
## Rows: 36 Columns: 10
## -- Column specification --------------------------------------------------------------
## Delimiter: ","
## chr (3): ind, fruit_type, fruit_color
## dbl (7): x, y, crop, DBH_cm, height_cm, se_obs_h, seeds_per_fruit
```

```
##
## i Use 'spec()' to retrieve the full column specification for this data.
## i Specify the column types or set 'show_col_types = FALSE' to quiet this message.

## If there is only one column with sampling effort, use it:
if (!net %in% c("15_01", "18_01", "18_02", "20_01", "21_01", "21_02")) {
  effort <- effort |>
    pull(starts_with("se_"), name = "ind")
}

# Otherwise, select sampling effort column in some specific nets:
if (net == "15_01") {
  effort <- effort |>
    pull(se_cam_days, name = "ind")
}

if (net %in% c("18_01", "18_02", "20_01")) {
  effort <- effort |>
    mutate(se_bc_months = se_bc_days/30) |>
    pull(se_bc_months, name = "ind")
}

if (net %in% c("21_01", "21_02")) {
  effort <- effort |>
    pull(se_obs_h, name = "ind")
}

## Some nets may require adjusting of the count data or effort values
## Insert that here eg.
# if (params$net == "01_01") {
#   mat <- round(mat/10)
#   mat <- apply(mat, c(1,2), as.integer)
# }

stopifnot(identical(length(effort), nrow(mat)))
stopifnot(identical(names(effort), rownames(mat)))

summary(as.numeric(mat))
```

```

## Running MCMC with 4 parallel chains...
##
```

```
## Chain 2 finished in 17.7 seconds.
## Chain 1 finished in 18.0 seconds.
## Chain 3 finished in 18.0 seconds.
## Chain 4 finished in 18.1 seconds.
##
## All 4 chains finished successfully.
## Mean chain execution time: 17.9 seconds.
## Total execution time: 18.2 seconds.
```

```r
get_seed(fit)
```

```
## [1] 911455842
```

```r
check_model(fit, data = dt)
```

```
## Processing csv files: C:/Users/frodr/AppData/Local/Temp/RtmpkDNfRE/varying_preferences-202406241410-
##
## Checking sampler transitions treedepth.
## Treedepth satisfactory for all transitions.
##
## Checking sampler transitions for divergences.
## No divergent transitions found.
##
## Checking E-BFMI - sampler transitions HMC potential energy.
## E-BFMI satisfactory.
##
## Effective sample size satisfactory.
##
## Split R-hat values satisfactory all parameters.
##
## Processing complete, no problems detected.
```

Preference (r) parameter: prior (dark grey) vs posterior (light grey) distrib
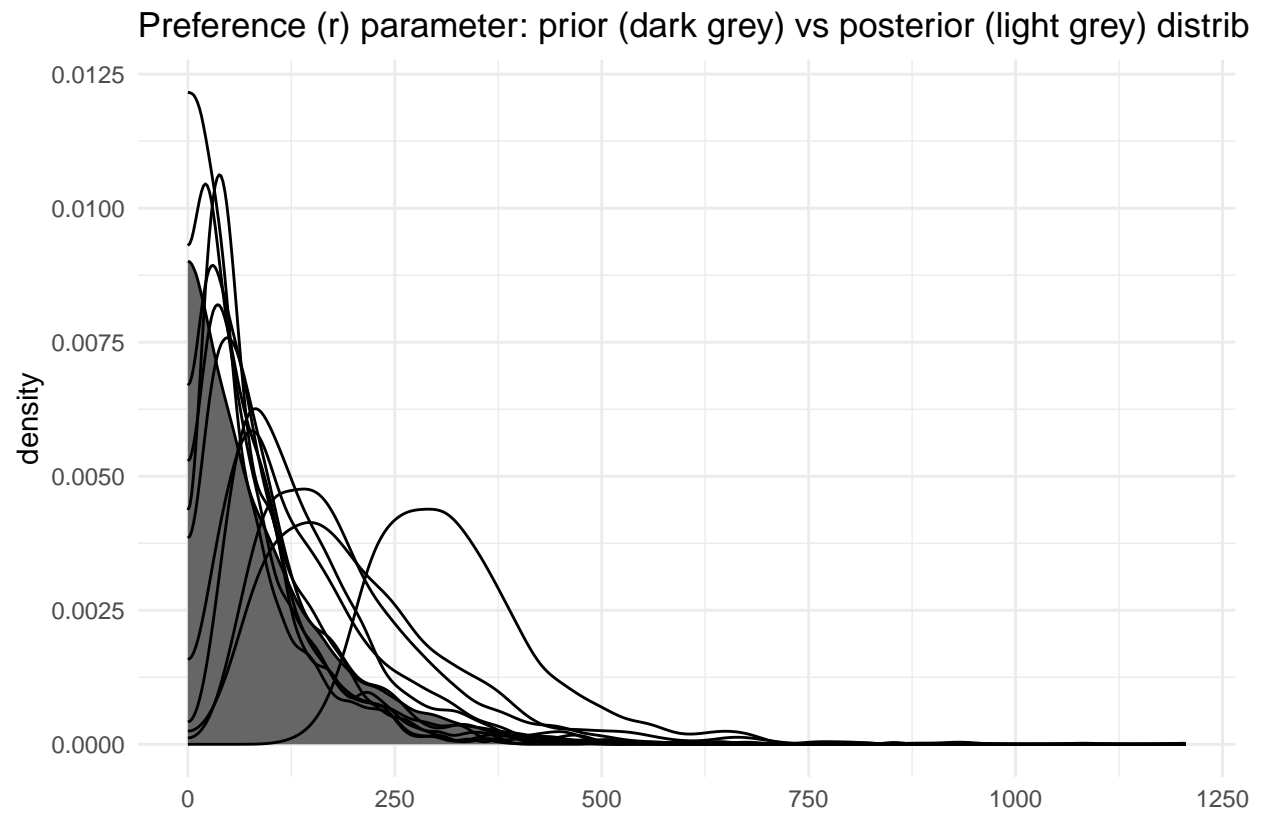

Log posterior across chains
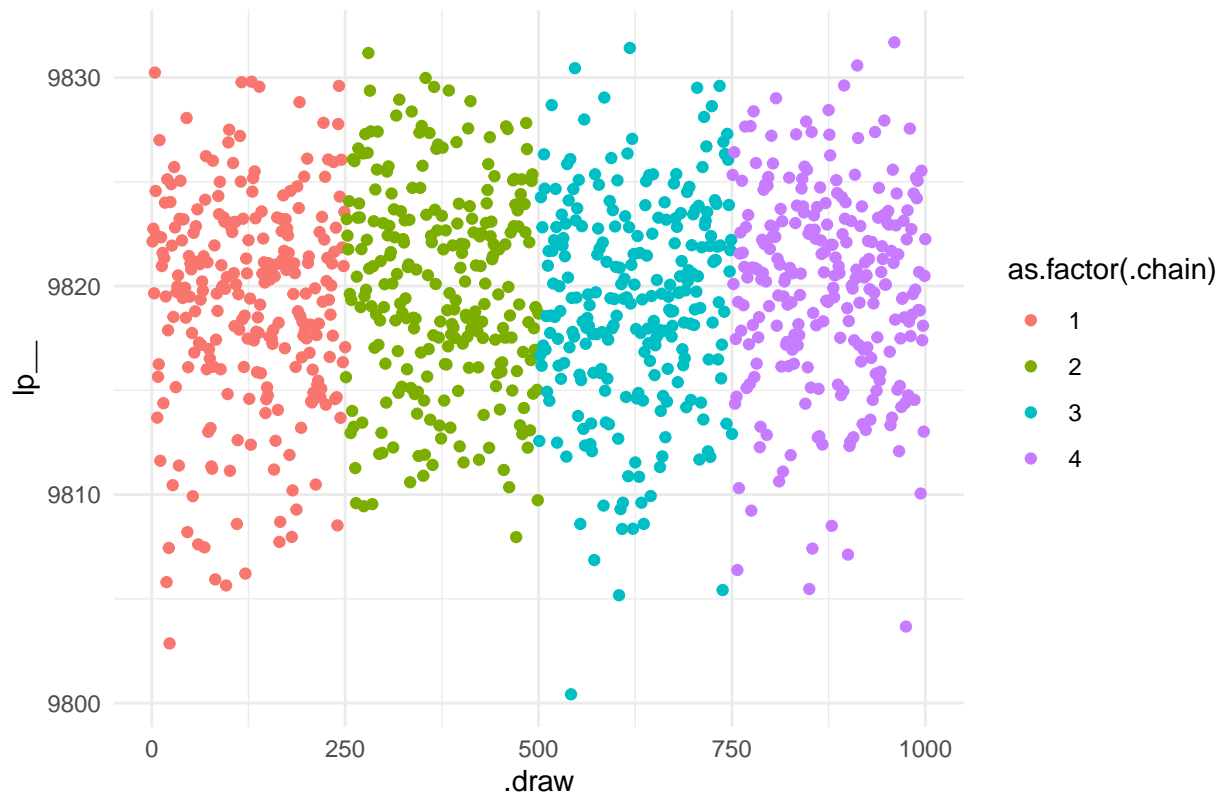

Posteriors

Get posterior distributions:

```
post <- get_posterior(fit, dt)

head(post)
```

```
